

CLAN – embedding still images

You may want to add still images to your transcript, for example screenshots of documents the participants are referring to in the talk, or a screenshot of the intonation contours.

This is how:

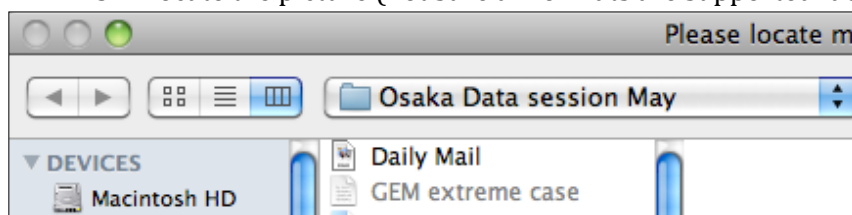

1. Make sure you are not in Sonic Mode (See Mode menu)
2. Insert a blank line into the transcript.

```
24      in the daily mail n dai- an' so on (0.2) •
25      i'd be a tmonster •
26      |
27      *PPP:      (0.2) •
```

3. In the blank line, add the header %pic: followed by a tab, and (optional) a name for the image

```
24      in the daily mail n dai- an' so on (0.2) •
25      i'd be a tmonster •
26      %pic:      Daily Mail
27      *PPP:      (0.2) •
```

4. Add a bullet (**ctrl+I**)
5. Locate the picture (not sure all formats are supported: definitely jpegs though)

6. Click **Open File**
7. The image is now added to your CLAN file. **Ctrl+click** on the bullet to see the image.
8. When playing the file with **esc+8**, the image will appear in a separate box when you reach the place where you inserted the file.
